

Student Performance Analysis Dashboard

BY ABISOYE OLALEYE

22/06/2026

Project Overview

► Objective

Analyze factors affecting student performance.

Identify patterns across gender, parental education, lunch type and test preparation.

► Dataset

1,000 student records.

Math, Reading, and Writing scores.

Dashboard Overview

Brief Description:

KPI cards show average scores and total students.

Visuals highlight performance trends and influencing factors.

Key Insights

- ▶ Female students outperform males in reading and writing.
- ▶ Male students perform slightly better in mathematics.
- ▶ Writing shows the largest gender performance gap.
- ▶ Test preparation significantly improves student outcomes.
- ▶ Students who completed test preparation achieved higher scores across all subjects.
- ▶ Writing benefited the most from test preparation.
- ▶ Higher parental education levels are associated with stronger student performance.

Recommendation

Schools should expand access to test preparation programmes and provide targeted academic support to address subject-specific performance gaps. Additional support should be given to students from lower parental education backgrounds to improve overall academic outcomes.

Conclusion

Student performance is influenced by multiple factors, including gender, parental education, and test preparation. Among these, test preparation showed the strongest positive impact on academic achievement.
